

Data Scientist (100% Remote)

- **Opportunity to work on a high growth, fast moving social media platform with millions of users**

Who are we?

We're a team of ambitious and talented people who are working on the next generation of music based social media platforms.

About the role

You will be working on performance and behavioral insights for a leading music based social media platform with millions of monthly active users.

What you'll have

- A background in statistics and experience in explaining models and results to both business and technical audiences
- Data visualization skills
- Technical proficiency with Python and SQL
- Demonstrated ability to extract actionable insights from data
- Experience building efficient queries and analytical processes with large datasets
- Experience with Postgres, Redshift or similar databases
- Solid analytical skills
- Ability to work swiftly and to tight deadlines

Beneficial for you to have:

- Some machine learning experience
- Experience with AWS
- Experience with Google Analytics, Firebase, Redash or similar analytics platforms
- Experience working with Pandas and large Parquet datasets
- Experience with data pipeline orchestration frameworks
